Thyroid control by TSH :
Do we care about TSH secretion patterns?

Patrice Mollard

Cellular in vivo imaging

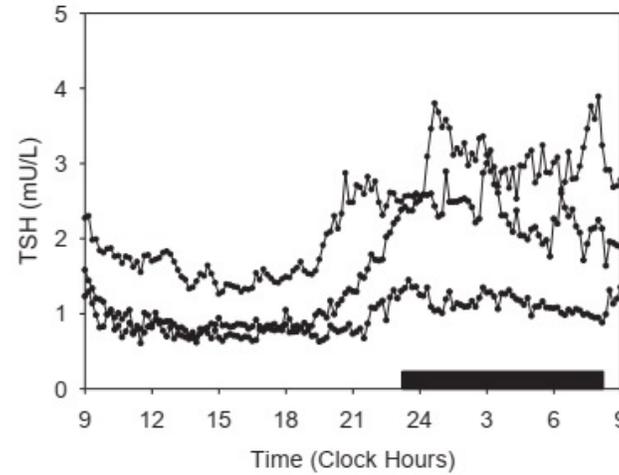

Mouse Hormone ELISA

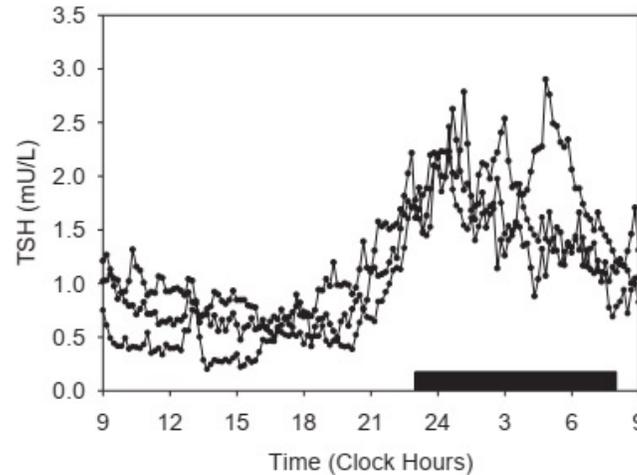

Hypothalamus-Pituitary-Thyroid axis: What do TSH pulse patterns mean?

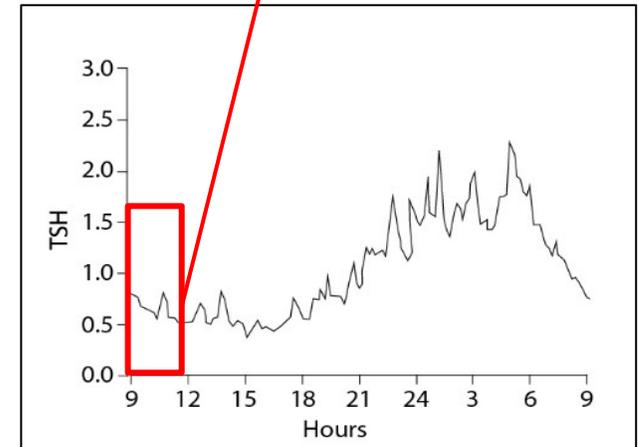

Serum TSH profiles in 3 Healthy Women.

Serum TSH profiles in 3 Healthy Men.

Single TSH measurement
to assess thyroid
function

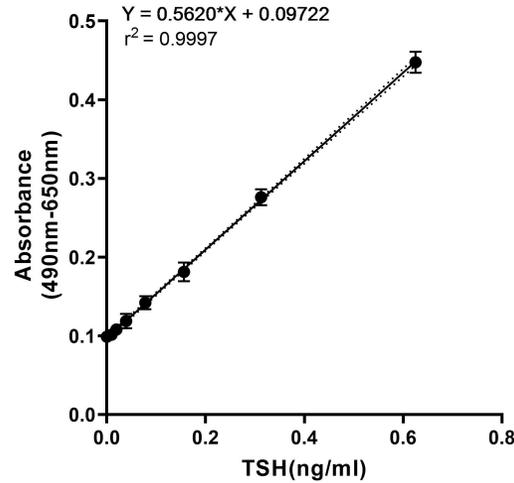

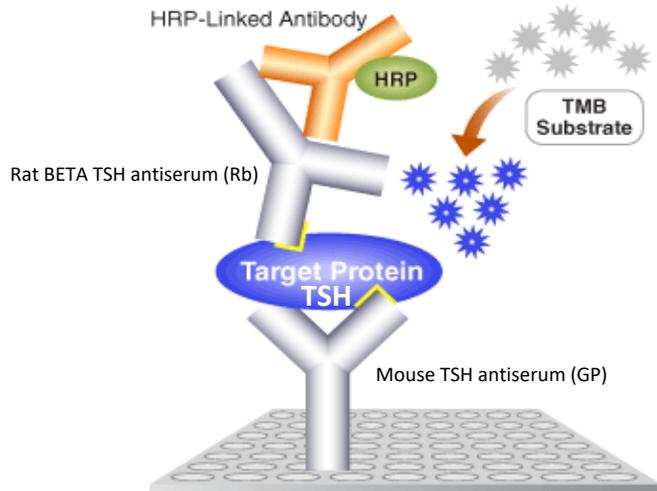

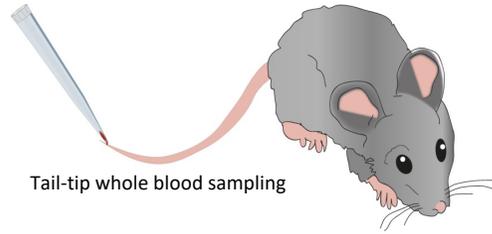

- 1/ Identify TSH secretion patterns in an animal model (mice)
- 2/ Compare the action of TSH pulses versus sustained TSH changes on thyroid signalling and TH release

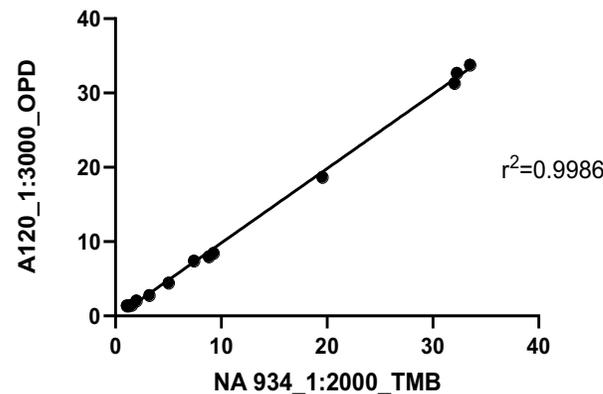

Roelfsema et al., JCEM 2009

Detect mouse TSH in a few blood microlitres

Ultrasensitive in-house mTSH ELISA

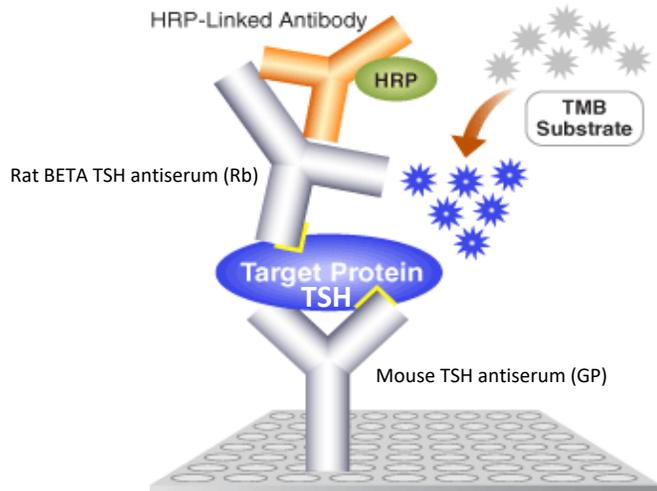

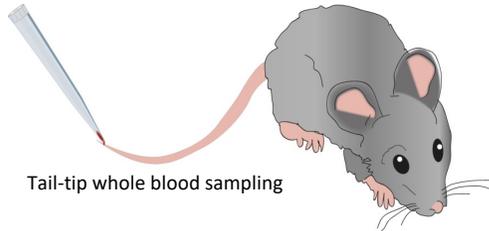

Samples run with two different protocols

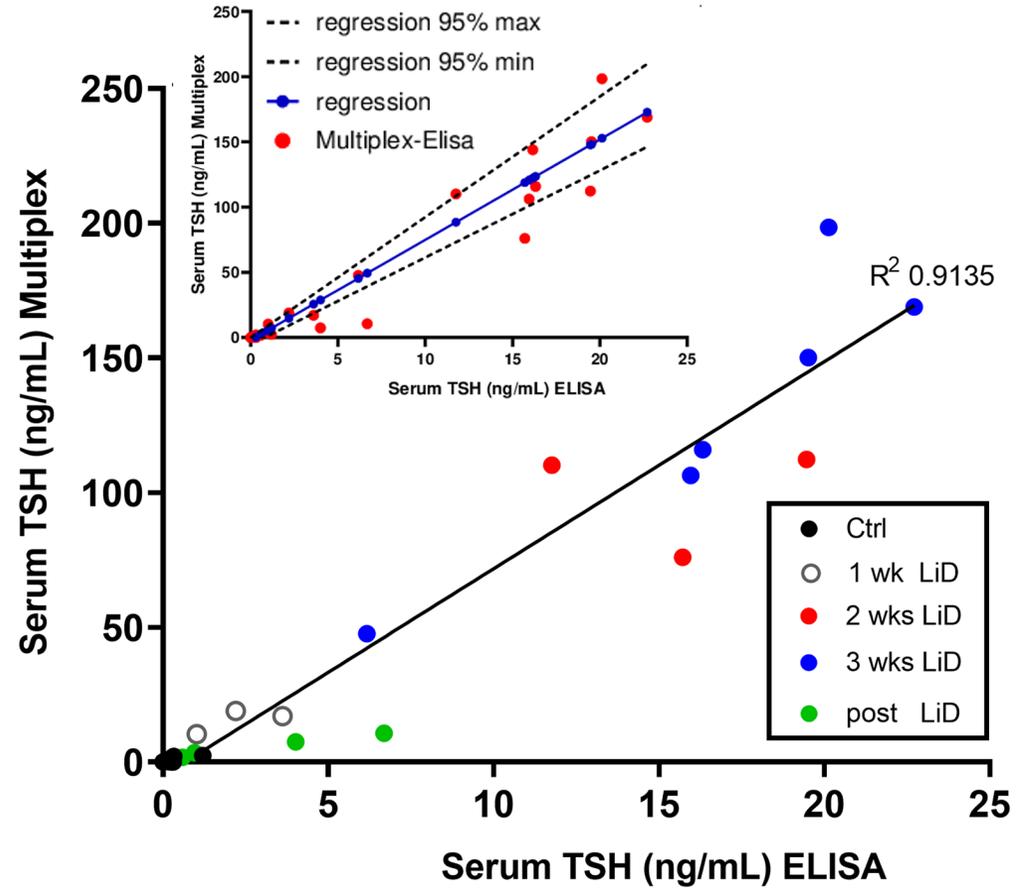

Repeatability precision	Mean ± SEM	CV (%)
Inter-assay CV (Whole blood) (Quality control)	6.970 ± 0.256	12.2
Intra-assay CV (Whole blood + 1.25ng mTSH)	1.106 ± 0.015	3.286
Intra-assay CV (Whole blood + 0.625ng mTSH)	0.6126 ± 0.0136	5.434
Intra-assay CV (Diluted Whole blood 1:20)	0.657 ± 0.007	3.290
LOB/LOD/LOQ		
Blank (OD values) (n=11)	0.09905 ± 0.00659	
LOB (mean blank + 1.645*(SD blank))	LOB = 0.1350	
LOD = LOB + 1.645*(SD low concentration sample)	LOD = 0.1721ng/ml	
Pipetting variability		
Whole blood sample 1	3.885 ± 0.038	3.133
Whole blood sample 2	6.629 ± 0.074	2.487
Accuracy/recovery		
2.5ng/ml		82.9%
0.15625 ng/ml		86.473%
0.039 ng/ml		92.685%

mTSH Elisa versus TSH luminex assay

Ultrasensitive in-house mTSH ELISA

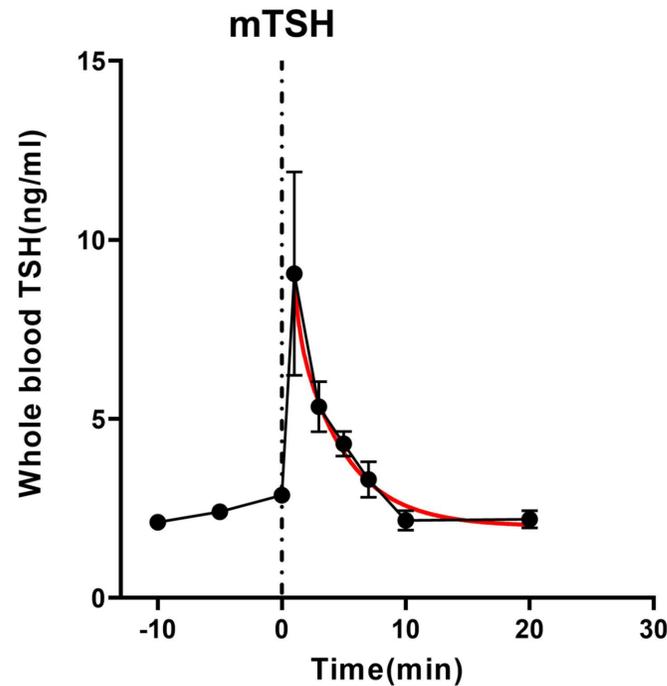

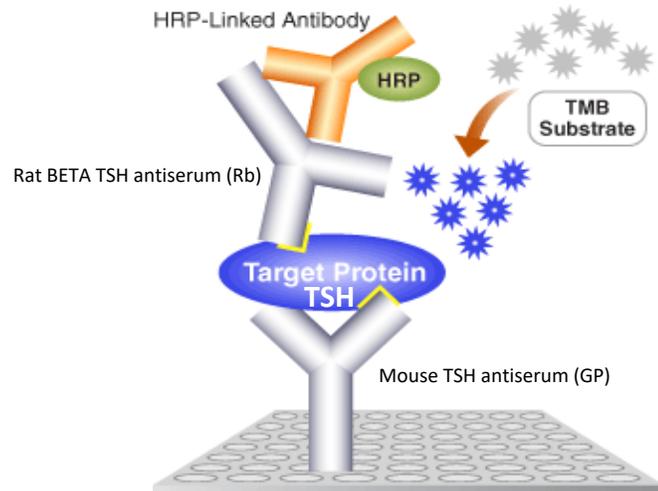

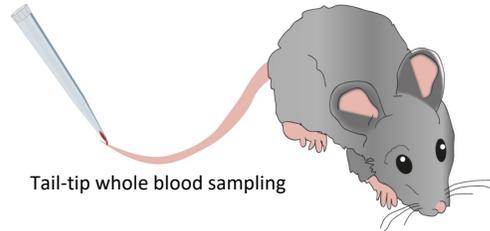

Luminex assays
Dan Bernard, McGill

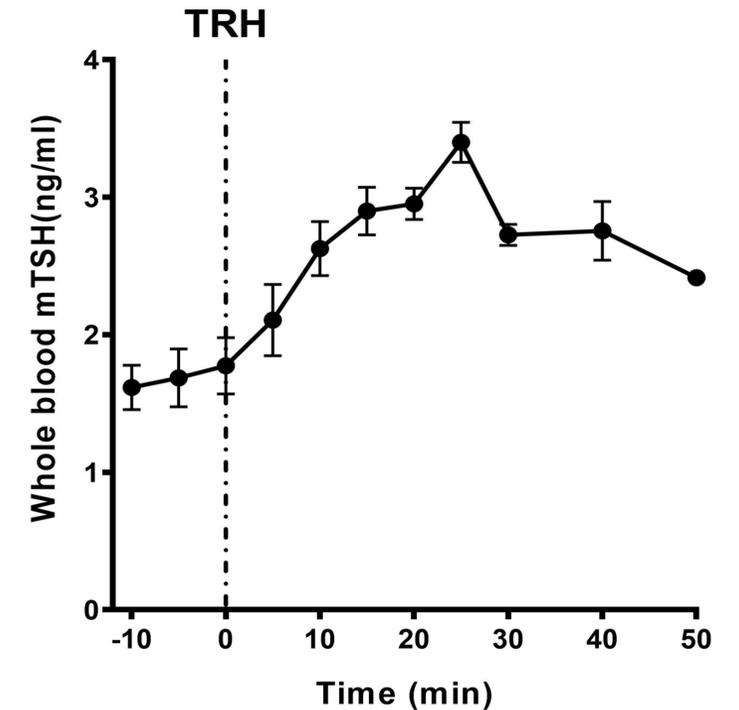

mTSH Elisa: in vivo detection of TSH changes

Ultrasensitive in-house mTSH ELISA

i.v. mouse TSH injection
(12 ng/ml of mouse blood)

Anton et al., Cell 2022

PDEs: spatial cAMP buffers!

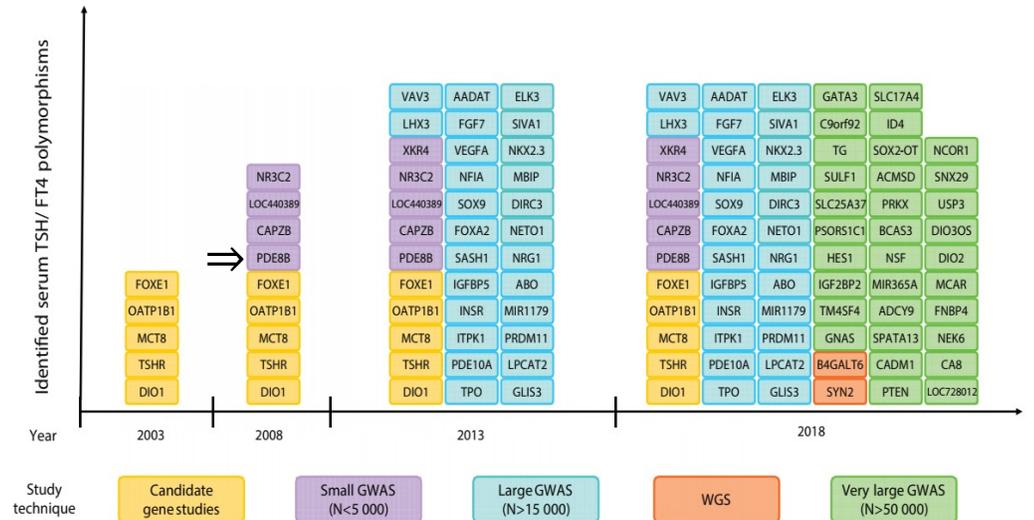

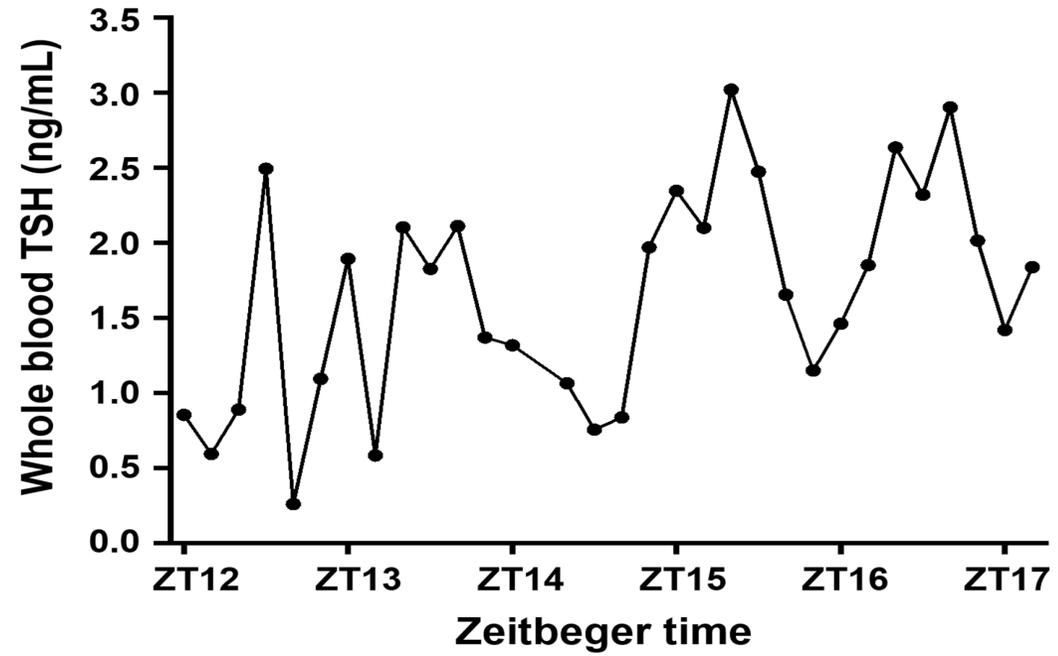

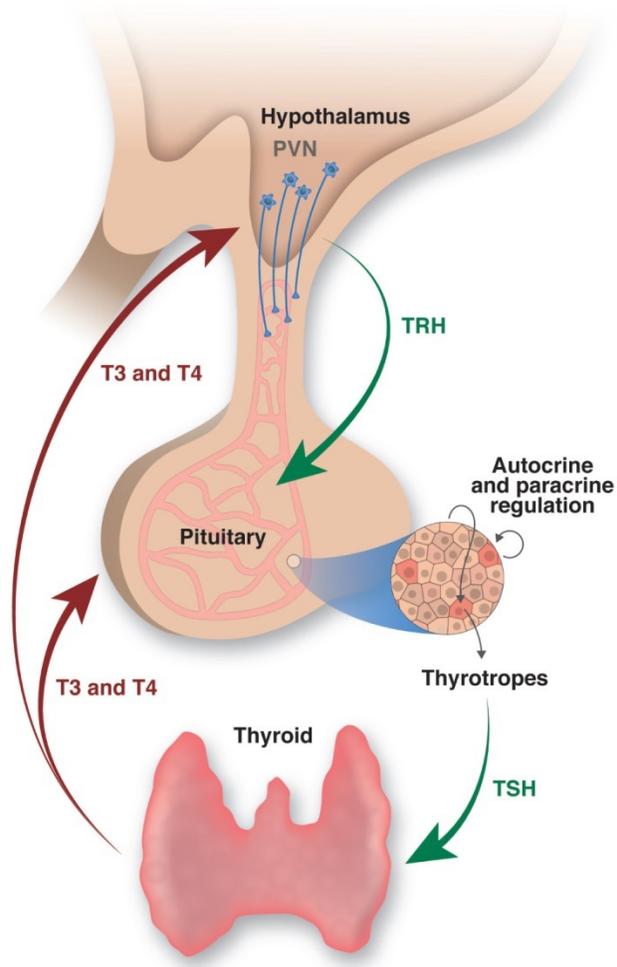

Figure 1. Identified serum TSH and/or FT4 associated loci over time, using different study techniques. Variants found to be significant in candidate gene studies were included when associations were replicated in at least one independent population (N > 50) or in case of in vitro evidence for functionality. Abbreviations: GWAS, genome-wide association study; N, number of subjects analyzed in the study; WGS, whole-genome sequencing.
